BED BUG TREATMENT

For best results, follow the preparation instructions below:

1. Remove all sheets, covers, dust ruffles, comforters, pillows, or any other bedding covers from your mattress and box spring in all bedrooms. Wash all bed linens in the hottest water possible and then run through a hot dryer cycle for a minimum of 40 minutes.
2. All clothes, on floors and hanging over chairs should be picked up and washed as above. Place the freshly cleaned clothes in a large garbage bag sealed at the top until the treatment has been completed.
3. Remove clutter and unnecessary items that serve as potential bed bug harborage areas. Check items for signs of infestation. Cardboard is a favored harborage for bed bugs. Dispose of any unwanted packaging materials to remove these harborage sites from your home.
4. Do not re-arrange furniture other than moving items three (3) feet away from the walls. It is not necessary to remove clean clothing items from draws or shelves unless these items are clearly heavily infested (visible bed bugs).
5. Remove outlet receptacle covers in all bedrooms and any living room areas.
6. Keep beds pulled out from the wall until bed bugs have been eradicated. All other furniture items can be returned to their original position after treatment.
7. For beds with built-in storage, remove all clothing items from these storage areas and launder and dry at high heat. Items may be replaced in to storage areas following the treatment.
8. Vacuum baseboards to remove dust build-up. Remove the vacuum cleaner bag or contents of the canister, place in a plastic bag, and dispose of in the trash can outside your apartment or home.

AFTER THE TREATMENT

In order to give the treatment time to work, do not clean or remove the spray barriers that have been applied. Leave these in place until you are certain that the infestation has been eradicated. The barrier will remain active for up to 3 months if left undisturbed, but can be easily removed with detergent and water, or disposable disinfectant wipes when required.

Please allow 3 to 4 weeks after the treatment for it to be completely effective. Bed bugs may not leave their harborages for a number of days after treatment; however, all bed bugs will die within 3 to 7 days after crossing a treated surface.
